

What is World Ranking?

World Ranking is an analysis of results based on each sailor's placement, in each race, even separate Match Races, and is a more performance-based alternative to Nadeos own ranking system. The base is to collect results from as many players as possible and then calculate a ranking, which then completely based on their respective place in each races.

To make the quantifiable results, I (Lazy.se) built and developed the database that collects and reads all the result files and then do a series of calculations on race results.

Just when the database was clear and fully developed, Nadeo came with an optional update that meant that all work must be repeated. This because the new results were. Xml-files with new conditions.

This booklet aims to provide answers and confidence for the World Ranking System and its veracity. It is important to create confidence in performance management, calculations, and describe the accuracy, precision and certainty behind.

To begin with, I never give out any results files or information about individual players on, this is a code of honour.

The sender of races will get two personal PDFs back, based on his files. One with local rankings for one year, and secondly pdf showing all accumulated races where each player is fully analysed. (can be a pdf with over thousands of A4 sites)

Here follow a description over the World Rank process - and the job behind, from A to Z.

First, The files are extracted, then they must be washed the unallowed ascii characters in Boat Name must be removed - otherwise damaging information when it enters the database.

Second Input, to a local database - consisting solely of the author's data. In the local database are estimates of the "Player Ranking" and the analysis with all his race. Exclusively send back to him - as thanks.

Third Security - 1, the player's local database is also a safety analysis that the data do not contain duplicates, ie some sort of copied the race. IF this safety passes will race released for inclusion in the main database.

MAIN DATA BASE

4th Security - 2: Analysis that there is "Duplicate Filename" - different races can have the same filename but still be different races.

Security - 3: Analysis of the content, parity filename / results - the method is called "fingerprints" but for security reasons I not describe details.

Security - 4: If the progress of the race results are already available, analyse (and correcting) the number of players, since there is players who leave the race before the last boat enter the finish line, and then only get players results equal to them who had crossed the finish line before he left. (He also will miss the Nadeo Rank)

Security - 5: "Rating and trust" which I not describe at all by security reasons.

Security - 6: "Manually": Is a database, I can check all data against each other by different search. Example: Its possible to check that a player not is on *two races* under the *same time*, made in a loop I check them all.

If the Security detects manipulated duplication or "bad" problem from any author, or not pass the security, then close all the author's result - and is then aged in any calculation. This will not be notified to the author/player.

PROBLEM DESCRIPTION

Duplicate Races & Confirmed Races

3- player sending a volyme serie of Races -> (A-B-C)

5th Loading, gathering facts and do calculations.

The entire file is loaded to the database - and duplicates into a parallel database - in a single automatic step. File content is given an ID and split up and go through the loops into several different registers: Among other things, Author, login, race lines, DNF, CSV, XML, Security, Fingerprint. Race line register is the heart of the system; from there is mostly related calculations done.

At this writing contains the "race line" 1 222 893 current "active" items from 70 767 race which most corresponds to approximately 5 -10% of all races sailed in VSK, quite enough to do statistic conclusion on most of the players.

World Ranking process *sort out* the race to be included in a calculation, such as; minimum "Starting Boats", which effectively screen out all results that do not achieve minimum number of "Starting Boats". The norm limit is 16 boats, which also separates all Mach-race and Team Races who normally is with less competitors.

CALCULATION

A player's "rate" consists of "Average Location" and "Fleet Rank" in part by a "% System", the later reflecting a better performance as the "number of sailors - in every race" reflects the valuation of positions 2 and down. This calculation is done during actual limited time period. By sort out the "Confirmed" races the related Author (= players who sending races) not get advantage. This also makes better security accuracy for ranking results, so if any "cheat-race" - it will not find confirming race... -Se picture 1.

DNF - readably related to cvs-files

DNF increased the number of "starting boats" with one (+1). The DNF gets "the worst position" = 0%. If no DNF - the last boat still "hit" the DNF - so he get the smallest amount of %. It also profitable for the last boat, the more DNF that he "hit". This score can also be modified by instead moving the calculation point to "number of boats over finish line + 1". But then everyone would have lower value of his performance, from location 2 and down, and the winner not be affected, which I see drawbacks in. The most important thing is that it is must be "costly" to leave the DNF. The system "rewards" the last boat in case a bit. (*In Nadeo Ranking the DNF even get points - which is crazy*). The two DNF options are in practice "Reward" or "Punish" all those players who do not leave DNF and not become winner of the race. Winner will take "advantage" if the context is "Punish" because he always get the value 100%.

Place in the Race	Boats crossing the start line				
	16	20	24	24	24
1	100%	100%	100%	100%	100%

DNS- readably related to cvs-files

DNS are excluded and are not included in the number of "Starting Boats", or in any valuation calculation.

-1 - readably related to cvs-files

(-1) Are spectators, not included in any way they are sorted out and erased and all the data is discarded from the database.

SEND YOUR RACES TO ME - PLEASE!

Please consider to becoming one of those who send the latest results folder to me! You job its important...Your results will "Confirm Races" and that is why your input is very important for thrust and reliability! zip the entire folder because older races "confirming and scale" to "rating and trust" security system.

As thanks, you get your own personal analysis, where all your results are included. In the second pdf you will find all the boats you encountered, and can for instance see who bills during the same login name, and it includes an analysis of each participants on each race and their knowledge and valuation. Do not forget that a PDF's content also is searchable! And you will receive the finally World Rank List - Top 100 by mail.

So please do a simple job, zip the "Results" folder (MyDocuments/vsk5*/Results) and send it to: lazy.vsk5@gmail.com, then I do mine...

* = The name of the games you have, could be 32AmericasCup, VskOnline or VSK5

/ Lazy.se

P.S. More possibilities

Its fully possible to "sort out" a group of player and do group analysis, ie for competitions, if any interests....

... It's also possible to do VS analysis between 2 players on all races they have meet each other, under a limited time.
